Bukidnon State University

College of Technologies · Department of Information Technology

COURSE SYLLABUS

IT 101 — Introduction to Computing

BS Information Technology · First Semester · Version 1

Course description

An introduction to the fundamentals of computing, covering hardware, software, data representation and basic problem solving.

Course learning outcomes

1. Explain the basic components of a computer system.
2. Convert between number systems.
3. Design simple algorithms using flowcharts and pseudocode.

Course outline

Week	Topic
1–2	Introduction to computing; history of computers
3–5	Hardware and software fundamentals
6–8	Number systems and data representation
9	Midterm examination
10–13	Problem solving and algorithms
14–17	Introduction to programming
18	Final examination

Grading system

Quizzes and exercises	30%
Laboratory / project	30%
Major examinations	40%

Sample document for the syllabus review walkthrough. Not an official syllabus.
