Bukidnon State University

College of Technologies · Department of Information Technology

COURSE SYLLABUS

IT 101 — Introduction to Computing

BS Information Technology · First Semester · Version 2 (revised)

Course description

An introduction to computing concepts, covering hardware, software, networks, data representation, algorithmic problem solving with Python, and the ethical use of technology.

Course learning outcomes

1. Explain the basic components of a computer system.
2. Convert between number systems.
3. Design simple algorithms using flowcharts and pseudocode.
4. Write short Python programs that solve everyday problems.
5. Discuss ethical, privacy and security issues in computing.

Course outline

Week	Topic
1	Orientation; course policies
2–3	History and impact of computing
4–5	Hardware, software and networks
6–8	Number systems and data representation
9	Midterm examination
10–12	Algorithms and flowcharts
13–15	Programming with Python
16–17	Ethics, privacy and security
18	Final examination and project defense

Grading system

Quizzes and exercises	25%
Laboratory / project	35%
Major examinations	40%

Sample document for the syllabus review walkthrough. Not an official syllabus.
